

- » A one-day workshop on how AI research enters military use—and researchers' responsibilities when it does.

[SUBMIT A PRESENTATION](#) [↗](#)[READ THE CALL](#) [→](#)**EDITION****02 • NEURIPS 2026****LOCATION****PARIS, FRANCE****DATE • TBC****DEC 12 OR 13, 2026****01 / ABOUT THE WORKSHOP**

From research to military use.

AI is used in military operations, surveillance, targeting, and autonomous weapons. The path from civilian research to military use is often hidden.

AI for Peace gives researchers a place to discuss those pathways and their own responsibilities. At **NeurIPS 2026 in Paris**, the workshop will cover harm prevention, research ethics, civilian protection, and international law. It also includes a facilitated discussion and an after-workshop social.

We reject the normalization of AI for military and surveillance systems.

WORKSHOP OBJECTIVES

01 Make the pipelines visible

Increase transparency about how AI research enters military, surveillance, and security applications.

02 Build collective responses

Develop collective strategies for the ethical, societal, and legal problems associated with military AI.

03 Support peace-building work

Support peacebuilding, humanitarian action, civilian protection, and accountability, including research that identifies or audits harmful AI deployments.

Call for in-person presentations.

Submit published work, new work, or work in progress on the topics below. Every accepted contribution will be presented as a poster.

OUR POSITION

We reject the normalization of AI for military and surveillance systems, recognizing that these technologies amplify violence and erode civil liberties.

FORMATS

Poster, talk, or both

REVIEW

Single-blind

Topics of interest

- ✓ Studies investigating how basic research transitions into military applications.
- ✓ Effects of AI militarization on marginalized communities and global inequalities.
- ✓ Research efforts that contribute directly to peace-building applications in a non-violent way.
- ✓ Collective strategies to address ethical risks as a community.
- ✓ Historical or comparative analyses of dual-use technology governance.
- ✓ Sociotechnical audits of existing military AI systems.

✓ Whistleblowing mechanisms and academic responsibility in high-risk research.

- ✗ Defense-oriented AI research without a critical, ethical, or governance perspective.
- ✗ AI safety or alignment work with no connection to militarization, conflict, or peace.

TIMELINE

ALL DATES · AOE (UTC-12)

Submission site opens	JUL 18, 2026
Submission deadline	SEP 14, 2026
Decision notification	SEP 29, 2026
Workshop day (TBC)	DEC 12 OR 13, 2026

SUBMIT AN ABSTRACT ↗

Deadline: September 14, 2026, Anywhere on Earth.
